Sill-Seal

Sill-Seal is a flexible, non-cross-linked polyethylene strip primarily used to reduce air infiltration between the concrete foundation and sill plate. It works by compressing to seal the gaps between the foundation wall and the sill plate.

- Closed-cell polyethylene foam won't fall apart on the job site or after years of use.
- Sill-Seal provides excellent resistance to water and water vapor.
- It is easy to install and does not irritate like fiberglass.

Sill-Seal is an eco-friendly alternative to using chemical pesticide treatments.

Technical Data

Closed-Cell Non-Cross-Linked Polyethylene Foam

Tensile Strength - ASTM D3575, ASTM D412

Machine Direction 41 psi

Cross Direction 37 psi

Elongation - ASTM D3575, ASTM D412

Machine Direction 210 psi

Cross Direction 185 psi

Dimensions

8", 10" or 12" wide x 50' long roll

Width:

8"
